

HVR Awards 2022
Apprentice of the Year

Supporting document – Additional testimonials

Jon Watts – senior electrical engineer at Finn Geotherm:

Since joining us, Sam has learned loads – starting from the ground up and absorbing information like a sponge. He has picked up everything shown very quickly. He has jumped at any tasks given to him showing great enthusiasm – including facilitation works for UKPN. He is never afraid to stay late if required and see a job through to the end. As well as the raft of knowledge on the electrical side, Sam has absorbed a great deal of plumbing information – ideal for a true heat pump engineer. This has included an ability to get around basic faults when identified. From being a slightly nervous new starter, Sam has grown in only a year to be confident and to use his own initiative in an appropriate way. As well as enjoying the complexity of our commercial systems, Sam is looking forward to undertaking more domestic heat pump installations by himself and also developing his skills on the test and inspect side. Sam is simply a joy to work with.

Leanne Gill, operations manager at Finn Geotherm:

Sam is always vigorously enthusiastic and motivated in his role. He has a strong ability to utilise his existing knowledge alongside that obtained from his senior colleagues to overcome any challenges presented to him. Having only joined Finn Geotherm 11 months ago, Sam has already become an invaluable member of the team.
